Data sheet Human IL-31 ELISA antibody pair; 20-plate format

Cat. No.: CT570-20

Coating antibodies (4 vials)

Product: Monoclonal antibody to human interleukin 31 (IL-31)

Isotype: Mouse IgG₁

Production: In vitro using serum free medium

Purification: Ion exchange chromatography

Buffer: Prior to lyophilization: 0.25 ml PBS + 125 mM trehalose

Application: Inject 0.25 ml distilled water into the vial and dilute 100 times in PBS. The content

of one vial is sufficient for five 96-well ELISA plates (480 determinations; 50

μl/well).

Detection antibodies (4 vials)

Product: Biotinylated monoclonal antibody to human interleukin 31 (IL-31)

Isotype: Mouse IgG_{2b}

Production: In vitro using serum free medium

Purification: Ion exchange chromatography

Labeling: With Biotin-7-NHS (N-hydroxysuccinimide)

Buffer: Prior to lyophilization: 0.5 ml PBS + 1% BSA + 125 mM trehalose

Application: Inject 0.5 ml distilled water into the vial and dilute 100 times in PBS + 0.5% BSA +

0.05% Tween-20. The content of one vial is sufficient for five 96-well ELISA plates

(480 determinations; 100 μl/well).

Standards (10 vials)

Product: Recombinant human interleukin 31 (IL-31)

Application: Cytokine standard in an ELISA system

Reconstitution: Dissolve the contents of one vial by injection of 0.5 ml distilled water into the vial.

Use immediately.

Conjugate (4 vials)

Product: SPP conjugate (Streptavidin-HRP)

Application: Inject 0.5 ml distilled water into the vial and dilute 100 times in PBS + 0.5% BSA +

0.05% Tween-20. The content of one vial is sufficient for five 96-well ELISA plates

(480 determinations; 100 μ l/well).

The product should be used in combination with TMB substrate.

General

Sensitivity: 32 pg/ml

Specificity: Validated for detecting natural and recombinant human IL-31 in supernatant

Sterility: Membrane filtered (0.2 µm)

Stability: Lyophilized SPP conjugate is stable for at least one year at -20°C in the dark, the

other lyophilized products are stable for more than one year at 4°C.

After reconstitution, the antibodies are stable for one year at 4° C (if kept sterile) and SPP for minimal one year at -20° C in the dark. The reconstituted standard

preparation should be used immediately.
